DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 20, drawn to a hydraulic propulsion system, classified in class 180, subclass 305.
- II. Claims 21 – 33, drawn to a fluid management device, classified in class 418, subclass 159.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because other types of hydraulic pump, i.e. piston based, are available to generate pressure. The subcombination has separate utility such as stationary pumps and compressors for gaseous/fluid materials of various types.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
